Part two ('Modelling and Simulation') deals with the different methods (DNS, Reynolds-Stress-Methods, LES ) available to solve turbulent problems. For the different approaches Pope describes different turbulence-models which can even be found in state of the art CFD software.

**Laminar Flow and Turblulent Flow in a pipe**

Laminar Flow and Turbulent Flow in a pipe. Fluids in motion encounter various resistance forces due to friction, as described above. Friction can occur between the fluid and the pipe work and also friction can occur within the fluid as 'sliding' between adjacent layers of the fluid. The friction within the fluid is due to the fluid's viscosity.
